//note=""Vector: proxysporr 6; Site_1: NotI; 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies. present sequence is provided in a specification relating to the use
                                                                                                                        of chamical shift data from nuclear magnetic resonance (NNRS) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also relates to compounds promoting the binding of substances to the PX domain, and compounds inhibiting the binding of substances to the PX domain, The invention can be used in the identification of substances that can be used in the requiation of reduced nicotinamide adenine dinucleotide phosphate (NADPH) oxidase activity, which is involved in superoxide production in inflammatory response in disease or trauma.

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB3234 to AAB54006. The human colon cancer antigens can have cytostatic, cardiactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune system disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present Colon cancer associated gene sequences, referred to as colon cancer antigens, useful for the treatment, prevention, and diagnosis of colon 44 gacacetteatecgteacategecetgetgggetttgagaagegettegtaceagecag 103 Gaps 78; .DB 21; Length 425; Indels Sequence 425 BP; 103 A; 145 C; 102 G; 75 T; 0 other; Query Match 23.4%; Score 323.8; 'DB 21; Best Local Similarity 84.1%; Pred. The present sequence is provided in a specification relating to the use of chemical shift data from nuclear magnetic resonance (NMR) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also relates to compounds promoting the binding of substances to the PX domain, and compounds inhibiting the binding of substances to the PX domain. The invention can be used in the identification of substances that can be used in the regulation of reduced nicotinamide adenine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; antiinflammatory; protein coordinate data; chemical shift data; nuclear magnetto resonance; NMR; structural coordinate data; Px domain; reduced nicotinamide adenine dinucleotide phosphate; NADPH; SH3 domain; NADPH oxidase; superoxide production; inflammatory disease; ds.

NOT COULD COURT OF THE PROPERTY OF THE PROPERT

```
The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the polypeptides of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to target antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bouns, cartiage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a
                                                                                                                                                                                                                                                                                                                                                                                                                                  immunomodulatory, cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiaviral; antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis; tissue regeneration; immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sclerosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, allergy, asthma, graft-versus-host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as motionation are used as probes and propertides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and princation of recombinant for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or NNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteopoxosis and osteoarthritis, anaemia, and contraceptive, treating osteopoxosis and osteoarthritis, anaemia, and the proliment's stroke, immune deficiencies resulting from bacterial, viral or fundal infection or from autoimmunity, cancer, allergy, asthma, and any any and any any and any any and any any and any and any and any and any and any and any any and any any and any any and any and any and any and any and any any and any any and any any and any any any any and any and any any an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          343 geceaagaaggaegtgaeaggtgeegaegeeaeegeegageeeatgateetggaaeagta 402

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 1383-1385; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokine receptors, adeaion molecules and their receptors, central nervous system (CNS) and peripheral nervous and non-nervous system creceptors, defensine, growth factors, vasoactive peptides and receptors, defensines and malignancy associated proteins. The receptors, binding proteins and malignancy associated proteins. The antistre dispense oligonucleotides may be used in this way to treat disorders including proteins and may be used in this way to treat disorders including proteins and may be used in this way to treat disorders including proteins. including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary associated with a disease or allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide AAF18434 to AAF21543 represent human polynucleotide antisense oligonucleotides used in the exemplification of the present invention. fragments and

New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or cancers

Disclosure; Page 1298-1301; 1343pp; English.

The present invention describes a new composition comprising an antisense oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatchy, antiallergic, antiallergic, antiallergic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation.

Impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respirator, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary hypertension, emphysema, chronic obstructive pulmonary and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the observadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA33312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last differ from the previously named sequences. SEQ ID NO:11 to 185, but the sequences (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. NB. Sequences given in the disclosure of the present invention. NB. Sequences given in the disclosure of the present given in the sequence listing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     oligonucleotides and compositions (1) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (1) can have respiratory, bronchodilator, antifilammatory, analgesito, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (1) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and mailgnancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific engaymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -
                                                                                                   chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide
                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                               Human low adenosine antisense oligonucleotide related sequence #2964
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes low adenosine (A) content antisense

transmitters, defensins, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (sepecially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypoproduction rejection, inflections, bronchitis, and/or cancer. AAR18434 to AAR21843 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; adenosine receptor: low adenosine antisense oligonucleotide; phosphorothloate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metaatasis; ss.

c inflammation. The ON can have antiinflammatory, antiallergies, and/or inflammation. The ON can have antiinflammatory, antiallergies, and/or antiasthmatic, cytostatic and analgasic activities. The compositions are useful for the treatment of diseases associated with inflammation, in mpaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive fibrosis, pulmonary precension, emphysema, chronic obstructive conformed and cancers which may metastasise to the lungs, including breast and cancers which may metastasise to the lungs, including content of the ONs reduces side effects. The A-containing ONs break down with the created cancer. The reduction of the adenosine content of the obstruction and inflammation. AAA-33313 to AAA-33312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID No:1 to 1887 but the sequences are also called SEQ ID No:1 to 1887, but the sequences (AAA-3232) to AAA-3323 to AAA-3324 to A
The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 75 BP; 15 A; 21 C; 19 G; 20 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     effectiveness of I-kappaB kinases or cyclic modecide phosphodiesterases which have the ability to cleave cyclic AMP and/or GMP. This involves modulating the specific effectiveness of the cyclic nucleotide phosphodiesterase or I-kappaB kinase by modulating the spatial distribution within cells of the animal. If the cyclic nucleotide phosphodiesterase used is a PDE3, PDE7, PDE8 or a splice variant of PDE4 (such as PDE4D), the method is used to treat inflammatory diseases such as chronic inflammation (especially airway diseases such as asthma and chronic bronchial hyper-reactivity of non-asthma etlology, joint discorders such as wheumatoid arthritis and pelvospondylitis and bowel diseases such as ulcerative colitis and Crohn's disease), autoimmune diseases associated with inflammation (such as diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mellitus type I, systemic lupus erythromatosus, myasthenia gravis, thashimoto's thyroiditis, Grave's disease and immune thrombocytopenic purpura), disregulations of the immune system (such as acute respiratory distress syndrome (ARDS) and septic shock) and/or depression distress syndrome (ARDS) and septic shock) and/or depression. Alternatively, if the cyclic nucleotide phosphodiseterase is PDE1, PDE2, PDE6, PDE9, PDE10 or a splice variant of PDE5, the method is used to treat hypo or hypertension, erectile dysfunction, circadian rhythm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               resetting or jet lag. The present sequence encodes a fusion protein of PDE4D4 and green fluorescent protein (GFP), which is used in the course
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1015 ttttctgcagcagcgacgccaggcggcgggcgggaccgcagagcccgggagccggt 1074

AAB54466. The human pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens, given in AAB54008 to neuroprotective, noctropic, immunomodulatory, relaxant, contraceptive, or paracological, cardiant and antiinflammatory activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be used to design nucleic caid hybridisation probes that can be used in chromosome mapping, linkage and alternation and/or typing and a variety of forensic cancer antigen polynucleotides can be used to design nucleic cancer antigen polynucleotides can be used to design nucleic cancel alternation and/or typing and a variety of forensic cancel antigen polynucleotides the cancer antigen protection and/or typing and a variety of forensic cancel antigen polynucleotides the cancel antigen polynucleotides can be used to design nucleic cancel antigen polynucleotides can be variety of forensic cancel antigen partners to the protection and or typing and a variety of forensic cancel antigen polynucleotides the cancel antigen polynucleotides can be used to design antigen cancel antigen polynucleotides can be used to design and a variety of forensic cancel antigen polynucleotides can be used to design and a variety of forensic cancel antigen polynucleotides cancel antigen polynucleotides cancel antigen polynucleotides can be used to design and antagonist cancel antigen polynucleotides cancel antigen polynucleotides cancel cancel antigen polynucleotides cancel canc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased.

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; actiparatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coapulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; nypotensive; dermatological; immunosuppressive; antidiabetic; presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy cetors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft valoat disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus acterial or fungal infection, malaria, automined dasorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, consultation antinflammatory disease; to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The specification describes antisense oligonucleotides (AAX52869-X55271)

directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, coding and non-coding regions intriation codons, genomic flanking regions, intron-exon borders, the intriation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or MX55272-74. These multiple target oligonucleotides (specifically AAX5580-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, and inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded constructive pulmonary disease (COPD), and cancers such as leukemias, pulmonary disease (COPD), and cancers such as leukemias, parcreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, carcinomas e.g. colon cancer, witchey cancer, melanomas, hepatic metastasized to the lungs, including breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Db 104986 GCGGCGCCCVGGCCVGNNHNNNSCGGCCCGGCCGCGCGCGCCCCVGGCCVGGCCVGCNNHNN 104927

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-457727/49

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the colon and rectum including colorectal cancers and also for testing and detection e.g. diagnosis -

Disclosure; SEQ ID NO: 328; 522pp + Sequence Listing; English

The present invention provides the protein and coding sequences of a number of colorectal cancer antigens. These are shown in AAI57547-AAI57619 and AAM38569-AAM38641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum. The present sequence is a colorectal cancer antigen genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

9229 T; 0 other; Sequence 32152 BP; 8332 A; 7335 C; 7256 G;

```
The present invention provides the protein and coding sequences of a number of colorectal cancer antigens. These are shown in AALIST61-AALIST619 and AAM38569-AAM38641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                colorectal cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           òγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                  The invention relates to human polynucleotides (AA163803-AA164012) and the encoded proteins (AAM43497-AAM4360) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists or useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, come, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, c.cohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal

The present invention provides the protein, coding and genomic sequences of the human polyamine-modulated factor-1 protein (PMF-1). The sequences, and antibodies and analogues of the protein, are useful in the treatment of cancer, via regulation of the spermidlne/spermine NI-acetyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2734 tretetttttttgttattttttttgtgtttttgagacagagtettgatettgttgeecaggeea 2793

Human neuroblastoma cell line NB-1 1p36 nucleotide sequence SEQ ID NO:75.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a homozygosity deletion domain co-existing in the 36-position of the first chromosome short arm (1p36) in human neuroblastoma. Also described are base sequences from the 1p36 position of human neuroblastoma cell lines (NB-1 and MASS-NB-SCH-1), which are tumour suppressor genes in human neuroblastoma. The genes are tumour markers and reagents in studying mechanism of tumour body formation, and gene diagnosis of tumours as well as in developing anti-cancer drugs. AAF977787 to AAF97829 represent PCR primers used in the exemplification of the present invention, and AAF97830 to AAF97841 represent sequences given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human 1p36 homozygosity deletion domain from the 36-position of first chromosome short arm in human neuroblastoma cell lines, applicable e.g. in gene diagnosis of tumors as well as in developing anti-cancer drugs

The present invention provides the protein and coding sequences of a number of ovarian and breast antigens. These are shown in AAIG2467-AAIG2572 and AAW42240-AAW42345. The sequences can be used in the diagnosis, prevention and treatment of breast and ovarian cancers, and their metastasses. The present sequence is a genomic sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders

AAA81452 represent Neisseria meningitidis MenB polynuclectide ORF sequences, which are all used in the exemplification of the present inventor. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a composition or be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to medicament) for treating, preventing or diagnosing infection due to neisserial bacteria. For example, some of the identification due too Noisserial bacteria. For example, some of the identification of sequences and and and an advantage of an antipacture of an antipacture of an antipacture. The particularly organism-specific probes. Attempts to make efficacious meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1271 TCTCAGCTCACTGCAACTTCAGCCTCCGGGTTCAAGTGATACTCCTGCCTCAGCCTCAT 1212

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes the coding and protein sequences of the human kinesin-like protein HKLP. It is thought that the protein could be involved in neurological disorders, infertility, spontaneous abortion, neonatal chromosome disorders, aneuploidy and cancers. This is due to its function in the movement of microtubules. The protein shows homology to the murine KIFIA and KIFIB proteins. The sequences disclosed in the invention can be used in the isolation of similar human proteins and in vector production. In addition, the biallelic markers shown can be used

the

invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The present invention provides the protein and coding sequences of a number of ovarian and breast antigens. These are shown in AAM16240-AAM42340. The sequences can be used in t diagnosis, prevention and treatment of breast and ovarian cancers, and their metastases. The present sequence is a genomic sequence of the

```
This sequence represents the human lipolysis stimulated receptor (LSR) genomic sequence. The novel LSR binds lipoproteins in presence of free fatty acids (FRA) and binds cytokines in absence of FRA. The nucleic acid and its fragments are used as probes and primers for detection and/or amplification of LSR genes; for production of recombinant LSR; for detecting allells variants, mutations, deletions, loss of heterozygosity and genetic abnormalities in the gene. LSR, recombinant cells and transgenic animals are used to screen for chemical interacting with LSR, also to study expression and activity of LSR and its interactions. The chemicals, and leptin, are used to modulate the number of LSR in a cell, its recycling rate and/or specificity of receptor activity, particularly of reducing the level of leptin, lipoproteins, chylomicrons and/or triglycerides. The chemicals are thus useful for treating eating disorders, particularly obesity (and related diseases such as atherosclevosis, hypertension and diabetes) or anorexia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2726 caagacctttctctttttttgttatttttttgtgtttttgagacagagtcttgatctgttgc 2785
